The Samsung Galaxy S10 Plus was the almost-everything-included Samsung phone you really want - if you can afford it and handle its massive 6.4-inch display. It was the highlight of the company's output from 2019, matching power and price with a decently-large (but not unwieldy) size. This was, perhaps, the ancestor for Samsung's new Ultra handsets, like the Galaxy S21 Ultra and Note 20 Ultra, offering the top specs available for a huge price. While it's still a powerful flagship phone, the S10 Plus isn't the biggest of the company's handsets, and that's not just because the Samsung Galaxy S10 Lite both have larger 6.7-inch displays. No, therefore the S10 Plus isn't the biggest of the company's handsets, and that's not just because the Samsung Galaxy S10 Lite both have larger 6.7-inch displays. Samsung Galaxy S10 Plus has been lapped by two generations of smartphones, with the latest Samsung Galaxy S21 Plus and even higher-specced Samsung Galaxy S21 Ultra are both bigger than the phone, with improved specs, cameras, and new features to boot. By now, the S10 Plus has gotten several discounts, making it still worth considering, especially if you like its stylish looks. We were immediately drawn to the Galaxy S10 and cheaper Galaxy S10e. It redefines what a 'phablet' is in 2019, with a 6.4-inch edge-to-edge screen so large it displaces the front camera to a hole in the top corner. It's Samsung's marginally better answer to the iPhone notch which persists into the iPhone 12 lineup, and while the S20 line has put its punch-hole in the center, we still have a soft spot for the S10 Plus tucking its selfie camera in one corner. With a 93.1% screen-to-body ratio, the pixels now stretch from the small top speaker down to the thin bottom chin, and spill over the curved left and right edges. This remains one of the best-looking screens in a smartphone. Hidden under the glass is an ultrasonic fingerprint sensor on the front, and the new Wireless PowerShare feature on back, allowing you to Qi-charge other devices. The back of the Samsung Galaxy S10 Plus has a triple-lens camera that takes normal, telephoto, and as a first for Samsung, ultra-wide photos. With the latter lens, you can capture more of what's in front of you - without having to take a few steps back. While it ranks below the Huawei P30 Pro on our best camera phone list, the S10 Plus is an amalgam of hallmark features in rival handsets with a dose of first-to-launch aspects like faster Wi-Fi 6 and an HDR10+ screen. It's the best overall package in among big pricey, smartphones. Sold? To complicate your buying decision, the Galaxy S10 5G is an even bigger and better S10 phone, the Samsung Galaxy Note 10 Plus is even more premium as a Samsung smartphone, and if you've got all the money in the world, the foldable Samsung Galaxy Fold is also available to buy - to say nothing of the S20 line and its incremental improvements. Despite these newer handsets, the S10 Plus is best Samsung phone, if you can handle the price and size. It has many competitors too though, like the iPhone 11 Pro Max, Sony Xperia 1, and OnePlus 7 Pro, all of which have similar specs and identical or lower price tags, so check them out before you commit to the Samsung Galaxy S10 Plus price and availabilityLaunched March 8 after a February 20, 2019 announcement128GB version: \$999 / £899 / AU\$1,499512GB version: \$1,249 / £1,099 / AU\$1,8491TB/12GB RAM edition: \$1,599 / £1,399 / AU\$2,399Galaxy S10 Plus specsWeight: 175q Dimensions: 157.6 x 74.1 x 7.8mm OS: Android 9 Screen size: 6.4-inch Resolution: QHD+ CPU: Octa-core chipset RAM: 8GB/12GB Storage: 128/512GB/1TB Battery: 4,100mAh Rear camera: 16MP + 12MP + 12MP Front camera: 10MP + 8MP Waterproof: IP68 Headphone jack: YesThe S10 Plus release date was March 8 2019, and it cost more than its predecessor at launch, the S9 Plus, although you can now find both phones on sale for a bit cheaper now that its successor has debuted. Today, the Galaxy S10 Plus price has gone down to start at \$849 / £769 / AU\$1,299, which is a decent discount that will likely increase during sales season.. At launch, it cost \$999 / £899 / AU\$1,499 for the 128GB of storage model with a ceramic back is \$1,249 / £1,099 / AU\$1,849. Samsung's 'Ultimate Performance Edition' variant, only sold on its own site, packs a mammoth 12GB of RAM and 1TB of storage, and has an equally monstrous price tag: \$1,599 / £1,399 / AU\$1,799 for 64GB of storage and no microSD card slot, and its smaller 5.8-inch iPhone 11 Pro, also with half the storage and no microSD slot, ties the price of this 128GB 6.4-inch Samsung Galaxy S20 Plus, for context, cost \$1,199 / £999 / AU\$1,649 for 128GB storage and \$1,299 / £1,099 / AU\$1,899 for 512GB, and both came with 12GB RAM.Display 6.4-inch QHD+ screen with an impressive 93.1% screen-to-body ratioInfinity-O display type's punch hole fits two front camera in top rightFirst phone with HDR10+, but beware of false touches from lack of bezelThe 6.4-inch Super AMOLED display on the Samsung Galaxy S10 Plus makes this the biggest S phone screen to date - bigger than 5.8-inch Galaxy S9 Plus and matching the Note 9 screen size. It's also a lot better. The main draw for us is the 93.1% screen-to-body ratio that fits more pixels across a tighter body. Samsung's new Infinity-O display avoids using a notch by opting for a laser-cut hole in the top-right corner for the front camera. The hole in this 'punch-hole' display is extra-large, as Samsung dropped in two front cameras to take better portrait selfies than the single-lens Galaxy S10 and S10e front cameras. Good news, we've not found it too distracting. The default resolution is Full HD+, but you can crank it to QHD+ and it's pin sharp, with HDR10+ for superior contrast and color. That's an important perk if you're a movie-watcher on your phone - an idea which isn't so crazy its size. One drawback to Samsung chipping away bezel: we found our encroaching palms making false touches on the sensitive screen (especially when typing), often flipping our on-screen keyboard between letters and numbers to output a bunch of gobbledygook in embarrassing messages. iPhone owners accustomed to more otherwise-ugly bezel and better palm rejection software, beware. The Infinity-O display is Samsung's new look for 2019, and it's enough of a change if you've been demanding something new. It looks fantastic, with bright, colorful reproduction making the best of images, icons, apps, games and video. There's a dedicated Bixby button below the volume rocker. (Image Credit: TechRadar) DesignHigh-end 512GB/1TB version comes with a premium ceramic backPerks: reverse wireless charging (new) and headphone jack (age-old) You'll want a case to avoid dropping this big, slippery phoneThe S10 Plus design is full of surprises, new and old. Its aluminum frame is thinner than that of the S9 Plus, and still sandwiched between smooth Gorilla Glass 6. Color choices are 'Prism' white, black and green, while the 512GB and 1TB versions are backed by ceramic in either white or black. Image credit: TechRadar The back of the Galaxy S10 Plus almost flush, with a triple-lens camera array that has a very subtle bump outlining it, and you won't be able to see the reverse wireless charging module is located below this. It's roughly the dimensions of the S9 Plus and feels better in-hand than the physically bigger Note 9, which has a 83.4% screen-to-body ratio. It's surprisingly easy to hold in the hand for a 'Plus'-sized handset, though those with smaller palms will find the glass-and-metal finish offers little in the way of grip. We found ourselves using two hands, especially to type, and suggest a case before walking out of the store with this one. On the left side, the volume rocker sits above a dedicated key for Samsung's smart assistant, Bixby. Press this, and you'll launch the assistant, giving you guick access to voice commands and the Bixby Today screen. Unfortunately, it's a little too easy to mistake this AI key for the volume-down button. Good news. Samsung is letting users re-map the undesirable Bixby button this time. Samsung remains one of the few phone makers that hasn't ditched the 3.5mm headphone jack, and what's impressive is that it's also trying to sell its wireless Galaxy Buds without axing this venerable feature. It's a show of strength that the company went with a consumer-friendly design choice here. There's a fingerprint scanner located just about the home button. (Image Credit: TechRadar) In-screen fingerprint sensorIn-screen fingerprint sensor is novel and mostly works for us nowUltrasonic sensor works better than optical, but requires more pressureStill not as fast or as fool-proof as a traditional fingerprint sensor is another feature that performs an invisible trick, taking a 3D scan of your print. It's more accurate than the Huawei Mate 20 and OnePlus 6T optical in-screen fingerprint scanners, even when our print was a bit wet. Its downside is a slower speed and the fact that more pressure is required. We experienced some failures completely. In time, we went from a first-time recognition success rate of 80% to a 95% success rate. Some of that was an update and some of it came down to getting used to the invisible sensor location. These issues can be mitigated if you opt to also set up face unlock, which we found could recognize us faster than the fingerprint scanner - the only issue here is that you have to be looking at the S10 Plus to unlock it and it's less secure. The three rear cameras on the Galaxy S10 Plus. Image Credit: TechRadar Camera for normal, telephoto and ultra-wide photos 12.3MP main camera takes excellent photos rivaling Pixel 3Ultra-wide camera is a great addition, even if it isn't always sharpNew 'Live Focus' portrait filters like Color Point are fun to use The Samsung S10 Plus, like the S10, includes a robust triple-lens rear camera array, comprising a 12MP main cameraImage 1 of 5Samsung's dual-aperture lens allowed us to capture vibrant-looking photos and even fairly good low-light pictures. The quality isn't always consistent (advice: take lots of the same photo), and it lacks something like the Google Pixel 3's dedicated long-exposure Night Vision mode. It ranks among the best camera phones for 2019 because it takes photos with bright, punchy colors. iPhone photos look rather muted compared to the S10 Plus. Side-by-side with the Pixel 3, though, its low-light capabilities are good, but not the best. In particular, it tends to denoise nighttime images, almost smoothing skin people's faces in an effort to reduce low-light graininess. 16MP ultra-wide cameraImage 1 of 5Samsung's ultra-wide lens does something Google can't do: capture photos with a 123--degree field of view. It's great for cramming more into the frame. When you're posing in front of tall buildings and iconic statues, whoever's lucky enough to be taking your picture won't be forced to cross the street in order to do so. Your welcome, kind photo-taking stranger. Be warned: the wide angle does have a fisheye effect, distorting people and objects at the edges of shots, appearing stretched compared to those in the middle. This lens is stunning for sweeping landscape photos and group shots in which people are tightly packed into the center of the frame to avoid the barrel-like warping. Live Focus portrait photos Image 1 of 5Live Focus is more fun with the Galaxy S10 Plus, with Samsung's portrait mode now offering a few different options. There's still the standard background blur effect - the amount of which can be easily toggled with an on-screen slide - but there are now three other options. Spin and Zoom offer different blur effects for a more arty shot, but it's the final option, Color Point, which is our favorite. This keeps your subject in the foreground in color, while turning the background black and white. It works extremely well, and the results are striking - and you can also select this option when using the front-facing cameras, for striking - and you can also select this option when using the front-facing cameras, for striking - and you can also select this option when using the front-facing cameras, for striking - and you can also select this option when using the front-facing cameras, for striking - and you can also select this option when using the front-facing cameras, for striking - and you can also select this option when using the front-facing cameras, for striking - and you can also select this option when using the front-facing cameras, for striking - and you can also select this option when using the front-facing cameras for striking - and you can also select this option when using the front-facing cameras, for striking - and you can also select this option when using the front-facing cameras for striking - and you can also select this option when using the front-facing cameras for striking - and you can also select this option when using the front-facing cameras for striking - and you can also select this option when using the front-facing cameras for striking - and you can also select this option when using the facing cameras for striking - and you can also select this option when using the facing cameras for striking - and you can also select this option when using the facing cameras for striking - and you can also select this option when using the facing cameras for striking - and you can also select this option when using the facing cameras for striking - and you can also select this option when you can also select the facing cameras for your can also select the young can also select th 2The front-facing cameras are 10MP and 8MP, with the latter coming into play for enhancing depth. This allows for better Live Focus portrait photos, and it's exclusive to the S10 Plus variant of Samsung's new phones. Images from the front cameras look good in everything but low light, where things become soft-looking as the software attempts to aggressively smooth out the noise, although of course this is an issue that isn't limited to Samsung phones. Do you really need a dual-selfie camera? No. The difference in between S10 and S10 Plus selfie quality is minimal. It's the least convincing upgrade, and the ability to take closer and wider zoomed front photos is a software trick not limited to the Plus.Camera appImage Credit: TechRadar Samsung's fully-loaded, yet easy-to-navigate app is where it makes up ground next to Google's more barebones camera app. We love returning features, like being able quickly flip between the main and front cameras by swiping up on the screen - it's like a big button. Taking a selfie with a gesture is also simple; you open your hand and then form a fist, and it'll start a countdown timer. New is Scene Optimizer's 10 additional categories, enabling the AI to be smart enough to recognize the main subject in a busy scene, and brighten things up a little as appropriate. Shot Suggestions hints at how to fix photos using the phone's neural processing unit (NPU). We found its real-time tips on leveling shots and framing subjects helpful addition to the camera UI. Video qualityVideo sees a healthy amount of upgrades in 2019. The S10 Plus offers new Digital Video Stabilization on the rear camera and, for the first time, HDR10+ recording. Samsung new stabilization technology is designed to make your Ultra HD video look as smooth as footage from an action cam, and while the handset doesn't have the same durability, it rival the stabilization of the GoPro Hero7 Black. As as close to a gimbal-like experience using only a smartphone, though the tiny DJI Osmo Pocket remains our favorite for silky smooth crane-esque video. HDR10+ video recording is a big upgrade because Samsung's prior phones lacked the ability to record support HDR. When turned on, we found HDR10+ kept scenes from overexposing care of additional contrast, but it also turned off saving to the newer HEVC format, which produces smaller file sizes. HDR10+ is tagged with a 'Labs' label, so it seems to be a work in progress. Image Credit: TechRadar BatteryMore than all-day battery life with the default Full HD resolutionThe 4,100mAh battery capacity is the largest in a Galaxy S phoneSamsung's fast charging is slower than rivals, but still beats AppleThe Samsung Galaxy S10 Plus was above average for Android flagships, delivering all-day battery life from its 3,500mAh unit, but the S10 Plus performed better for us in our tests. Samsung still claims "all-day battery life or a bit more", maybe because of the bigger screen here, or maybe just to play it safe. With moderate use - a couple of hours of Spotify streaming, a healthy amount of messaging and social media, an hour or two of Netflix and a smattering of gaming we found it easy to end the night with an impressive 10% to 30% battery left. Start enabling some of the additional features on the Galaxy S10 Plus does come with a host of power saving modes with the most aggressive and changing Full HD+ to QHD+. The Galaxy S10 Plus does come with a host of power saving modes with the most aggressive. maximum power saving - locking down the interface to just a few key apps (of your choosing), ensuring you still get hours from you final few percent. Samsung Wireless Power Share in action. Image Credit: TechRadar 'Wireless Power Share in action. Image Credit: TechRadar 'Wireles like this feature better than you doSamsung's new Wireless PowerShare feature turns the back of the S10 Plus into a big Qi charging mat, which is great if you're feeling generous when your friend runs low on battery and feel comfortable sparing some of your hefty 4,1000mAh capacity. It worked flawlessly during our tests, enabling us to charge the Galaxy Buds in their case when we placed them on the lower third of the back of the phone. Samsung hasn't showed favoritism here either: any Qi charging phone worked in our tests, including the iPhone XS Max. We used this feature more than we thought we might during our time at MWC 2019 - and we became quite popular. Knowing that PowerShare turns off when your phone drops down to 30% battery life is comforting - as is realizing that your iPhone XS-owning friend has a 2,658mAh capacity for the price of your S10 Plus.Reverse wireless charging is found in the Huawei Mate 20 Pro, but Samsung makes it much easier to access Wireless PowerShare via the quick settings menu
